Technology Without Compromises

WHY HAVE WE CHOSEN TO DESIGN AND THINK USING THE TWC PHILOSOPHY?

AN OLD ITALIAN SAYING (BUT WE BELIEVE THIS IS EXISTING IN ALL COUNTRIES AND LANGUAGES) SAYS: FINAL CALCULATIONS ARE DONE AT THE END AND NOT BEFORE.

All of us often make the biggest mistake when we have to buy a specific product: we look at its initial price forgetting that the real price and profit of this choice can only be seen at the end of the life of the investment. The best choice gives us a big advantage every day. **EVERY SECOND OF ITS USE. FOR 10, 15 YEARS.** In addition to give the customer the possibility to build products unachievable for others, with higher accuracy and quality, **thanks to the quality of components selected, also the impact of the annual cost of use it will be greatly convenient. TWC philosophy is a forward-looking choice.** It puts the respect for the customer in first place, in the ideal and clear condition to **analyze the investment in a correct economic logic,** looking at the end of its life cycle and not at the beginning.
